New product information

New insulated test pin sleeves prevents short-circuits

Conforms to safety standard
IEC61010-031 (revised) for hand-held probes

Sleeve attached **No Sleeve attached**

What are the new and additional requirements of the international safety standards?

1. "Exposed metal part must be 4mm or shorter" (Previously, 19mm max.) for CAT III and IV environments to prevent short-circuits from occurring.
2. Double-coating with different colors enables you to identify the wear condition of the test leads. (Previously, single-coated)

Detachable!

When a sleeve is not attached, the test leads can only be used in a CATII environment.

***When used in CATIII environments, test pin sleeves are required.**

Included as a standard accessory
(This sleeve cannot be attached to previous products)

No sleeves attached to the tip of test leads?

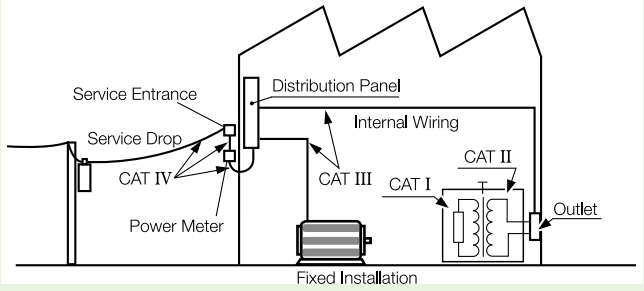
DANGER of short-circuit accident!!

Previous model

With a sleeve attached to the tip of test leads,

short-circuit accidents can be prevented.

NEW!



Measurement categories (Overvoltage categories)

To ensure safe operation of measurement products, IEC 61010 establishes safety standards for various electrical environments, categorized as CAT I to CAT IV, and called measurement categories. These are defined as follows.

CAT I : Secondary electrical circuits connected to an AC electrical outlet through a transformer or similar device.

CAT II : Primary electrical circuits in equipment connected to an AC electrical outlet by a power cord (portable tools, household appliances, etc.)

CAT III : Primary electrical circuits of heavy equipment (fixed installations) connected directly to the distribution panel, and feeders from the distribution panel to outlets.

CAT IV : The circuit from the service drop to the service entrance, and to the power meter and primary overcurrent protection device (distribution panel).

Higher-numbered categories correspond to electrical environments with greater momentary energy, so a measurement product designed for **CAT** III environments can endure greater momentary energy than one designed for **CAT** II. Using a measurement product in an environment designated with a higher-numbered category than that for which the product is rated could result in a severe accident, and must be carefully avoided.
Never use a **CAT** I measuring product in **CAT** II, III, or IV environments.
The measurement categories comply with the Overvoltage Categories of the IEC60664 Standards.

The TEMP scale on Model 3030-10 is not effective without Model 9021-01 Temperature Probe, which has been discontinued.

To prevent electric shock, a fuse for protection up to a commercial power supply of 250V is integrated into the internal circuitry of Model 3030-10. Please note that the fuse is not intended for preventing damage to the unit.
